

Design and Equipment Features - LKSKI

Design Features

- Self-closing doors and restricted access
- Windows that don't open
- Rooms under pressure (positive/negative)
- Easy to clean and sturdy benchtops and unblocked pathways
- Service elevators for moving biohazardous material
- Emergency power back-up
- Sinks, eye wash and emergency showers

Equipment

- Chemical fume hood is ventilated enclosure used to trap and exhaust hazardous vapors, aerosols or particulates thereby protecting the user.

- Biosafety cabinet is a primary containment device used to protect personnel against biohazardous or infectious agents and to help maintain quality control of the material being worked with as it filters both the inflow and exhaust air.
